Calypso's directions, worked into numbers in [[studies/steering-by-the-bear]]: keep the Great Bear on the left hand and hold a heading of about 50 degrees. The crossing is planned, not made; Scheria is a planned landfall.

TO SCHERIA

632 km

planned

PASSAGE

17 days

planned

HEADING

50°

east of north

SUPPORTING FILES

`studies/steering-by-the-bear.md`

Calypso's instruction made into numbers: the heading is about 50 degrees, and the Bear sits between the left beam and the left bow depending on the hour.

`studies/crossing-distance-and-margin.md`

The 788 km is the whole way home. The seventeen days are the open water to Scheria, about 632 km: 37 km a day. Calm days spend the margin fast.

`knowledge/great-bear.md`

Also called the Wain. Turns in one place, watches Orion, and alone of the stars never bathes in Ocean. Calypso's instruction: keep it on the left hand.

`studies/water-ration.md`

One skin holds about 18 litres. Seventeen days at a bearable ration needs 34. The shortfall is 16 litres before any delay, and July does not rain.
